Acknowledgements

We gratefully acknowledge the enthusiasm and excellent cooperation of the resource managers, rangers, and other Corps personnel at Lake Ouachita and the representatives from the Vicksburg District Office. Their contribution of practical experience and knowledge, along with their assistance in arranging schedules, have made this carrying capacity research effort possible.

Destroy this report when no longer needed. Do not return
it to the originator.

The findings in this report are not to be construed as an official
Department of the Army position unless so designated
by other authorized documents.

20. ABSTRACT (Continue on reverse side if necessary and identify by block number) This report provides selected recreation carrying capacity-related information for the Lake Ouachita Project. The information is based upon: 1) user and management surveys conducted at Lake Ouachita, and Urban Research and Develop- ment Corporation's observations and perceptions of the situations at the project's activity areas. The report provides information regarding activity situations, user characteristics, carrying capacity findings, and other findings; it then focuses on selected problem situations and their possible solutions.

PREFACE

This report presents the findings and recommendations of the Urban Research and Development Corporation (URDC) relative to recreational carrying capacity at the Lake Ouachita Project Area. Results of site analyses and user surveys are presented as they relate to existing carrying capacity conditions on the project. The study was conducted under Contract with the U. S. Army Engineer Waterways Experiment Station (WES), Vicksburg, Mississippi, (Contract No. DACW39-78-C-0096).

Mr. Donald R. Detwiler, President of URDC, was Principal-In-Charge of this study, assisted by Mr. Martin C. Gilchrist, Executive Vice-President and Mr. David H. Humphrey, Vice-President. Mr. B. Thomas Palmer, Project Director, had the major responsibility for technical project direction; Messrs. Phillip D. Hunsberger and Paul L. Sabrosky were involved in the site analysis, conducting surveys, and the success analysis; and Mr. Timothy A. Fluck was involved in conducting surveys, survey analysis, and development of methodologies.

Mr. R. Scott Jackson, WES was the Project Monitor. Dr. Adolph Anderson, WES, was Program Manager of the Environmental Laboratory (EL) Recreation Research Program. The study was supervised by Dr. Conrad J. Kirby, Chief, Environmental Resources Division, EL, under the general supervision of Dr. John Harrison, Chief, EL.

COL John L. Cannon, CE, and COL Nelson P. Conover, CE, were Commanders and Directors of WES during this study. Technical Director was Mr. F. R. Brown.

CONVERSION FACTORS, U. S. CUSTOMARY TO METRIC (SI)
UNITS OF MEASUREMENT

U. S. customary units of measurement used in this report can be converted to metric (SI) units as follows.

<u>Multiply</u>	<u>By</u>	<u>To Obtain</u>
acres	4046.856	square metres
Fahrenheit degrees	5/9	Celsius degrees or Kelvins
feet	0.3048	metres
horsepower (550 foot and pounds per second)	745.6999	watts
inches	2.54	centimetres
miles per hour (U. S. statute)	1.609344	kilometres per hour
miles (U. S. statute)	1.609344	kilometres
square feet	0.09290304	square metres
yards	0.9144	metres

* To obtain Celsius (C) temperature readings from Fahrenheit (F) readings, use the following formula: $C = (5/9) (F - 32)$. To obtain Kelvin (K) readings, use $K = (5/9) (F - 32) + 273.15$.

PART 1: INTRODUCTION

RECREATION CARRYING CAPACITY FACTS AND CONSIDERATIONS

LAKE OUACHITA PROJECT AREA

PART 1: INTRODUCTION

This Report

Purpose

This report, prepared as the fourth in a series of the U. S. Army Engineer Waterways Experiment Station's (WES) Recreational Carrying Capacity Design and Management Study reports, provides selected carrying capacity-related information for the Lake Ouachita Project Area which cannot be found in the Technical Report. The information is based upon: 1) the user and management surveys conducted at Lake Ouachita, and 2) Urban Research & Development Corporation's (URDC) observations and perceptions of the situations at the project's study activity areas. Some observations and suggestions dealing with project area planning, design, and/or management are included, even though they are not specifically carrying capacity related. The report also suggests specific solutions and treatments of specific recreation activity areas.

The report first provides information regarding activity situations, user characteristics, carrying capacity findings, and other findings; it then focuses on selected problem situations and their possible solutions. Although suggestions regarding possible solutions to problems are included, this report is not intended to be a substitute for master planning or to provide answers to all project area capacity problems. Instead, this report should be viewed as a constructive, informative document which points out directions and techniques for consideration by project managers and designers in the near or distant future.

Relationship to Technical Report and Handbook

In addition to this Project Area Report and similar reports on the other ten study project areas,* the overall capacity study effort produced a Technical Report and a Capacity Handbook:

- a. The Technical Report describes the overall study process, reports detailed study findings, and suggests and demonstrates methods and techniques for capacity management.
- b. The Capacity Handbook is a more graphic, "how-to-do-it" type of report, designed to serve as a useful field tool for determining carrying capacity and applying techniques for capacity design and management.

This project area report is different from the Technical Report and Handbook in several ways: it includes information not found in the Technical Report and Capacity Handbook; it reports and examines user survey information by activity area and project area, rather than from the total survey population; it addresses specific problems and examines possible solutions; and it does not include the methodologies for determining and monitoring social and resource capacity. For these reasons, this report is intended to compliment the Technical Report and the Handbook, and is not intended to substitute for them.

Qualifications

The information in this report is based on the Management/Site Survey conducted on November 15-17, 1978 and the User Survey conducted on June 15-17, 1979 by Urban Research and Development Corporation (URDC). (See Appendix B.) The user survey information was collected over a one-weekend period, which may or may not have been representative of a typical or heavy use weekend at Ouachita. Interviews were limited at some activity areas because of such factors as lack of users and weather conditions. For these reasons and because carrying capacity analysis is dynamic rather than static, this report is not intended to provide the final answers. Rather, it is a foundation for future analysis and carrying capacity progress.

* See definition of "Study Project Area" in Appendix A for a listing of these project areas.

Summary Project Area Description*

Blakely Mountain Dam and Reservoir** was authorized for the purposes of flood control and hydroelectric power generation. Lake Ouachita is located in west central Arkansas, 13 miles[§] northwest of Hot Springs and 60 miles southwest of Little Rock. Approximately 2.8 million persons live within 150 miles of the lake. The total project area is 82,373 acres with a lake surface area of 40,060 acres, a lake shoreline of 690 miles, and a land area of 48,300 acres when the lake is at the average recreational pool elevation of 578 feet msl. The steep sloped and heavily wooded landscape distinguishes Lake Ouachita from many other projects visited. Normal summer temperatures are in the middle 80's (degrees F.) with extremes to 100 degrees F., and the average annual precipitation consists of 48 inches of rain and two inches of snow.

Access to the more developed southern portions of the lake is provided by state and county roads leading from U.S. 270. State roads provide access to the northern and western shores. The eastern shore is accessible at two locations (the damsite and at Ouachita State Park) via state roads. The travel distances of the Corps recreation areas from the primary highway vary from two to seven miles. In 1978, attendance reached almost three million recreation days.

* Appendix C contains a more detailed project area description for your future use.

** See map inside back cover.

§ A table of factors for converting U. S. Customary units of measurement to metric (SI) units is found on page iv.

PRECEDING PAGE BLANK-NOT FILMED

PART 2: SURVEY FINDINGS BY ACTIVITY

CAMPING

Orientation

The campgrounds at Ouachita provide opportunities for walk-in tent camping and trailer camping. Camping is permitted only at designated sites and each campsite may have no more than two camping units (e.g. trailer, tent, etc.). Most of the campgrounds visited provide 60 to 80 sites and contain overflow areas, registration stations, dump stations, and nearby boat launching facilities. No individual electric or water hook-ups are provided at the Corps campsites. Most campsites enjoy easy access to the lake. Camping on islands is popular.

The remaining findings of this section are based on the User Survey. The User Survey at Ouachita obtained 80 responses from campers at Brady Mountain, Crystal Springs, and Joplin campgrounds.

User characteristics

Table 1 indicates the characteristics of the campers surveyed at Ouachita. The most significant differences in the characteristics of the campers surveyed at Ouachita from those of other study project areas are: 1) the relatively few campers from nearby areas, and 2) the relatively large number of tent campers.

Table 1
Camper Characteristics

<u>Age</u>	<u>Percent of Campers</u>	<u>Group Size</u>	<u>Percent of Campers</u>
<18	3	1	0

**Significantly lower than total survey sample.

User opinions

Spacing preferences - Tables 2 and 3 indicate the spacing (as measured on center of each site) that campers surveyed at Ouachita and elsewhere prefer.

Table 2
Preferred Distance Responses* - Camping

Sample	Sample Size	Range	Mean	Median	Mode
All Campers Surveyed (11 projects)	511	10 - a	79	60	75
Ouachita	55	35 - a	74	60	60
Brady Mountain	26	35 - 100	66	70	70
Crystal Springs	19	40 - a	65	60	60
Joplin	10	35 - 300	123	80	--

* in feet; See Appendix A for definitions of terms.
a - response of "alone" or "out of sight."

Table 3
Preferred Distance Responses in Planning Range and Preference Groupings*

Sample	% in Planning Range ¹ (20'-120')	% in A ² (20'-39')	% in B ² (40'-59')	% in C ² (60'-79')	% in D ² (80'-120')
All Campers Surveyed	90%	20%	28%	31%	21%
Ouachita	94	4	29	39	37
Brady Mountain	100	4	27	50	19
Crystal Springs	89	0	35	41	24
Joplin	80	13	25	0	63

* See Appendix A for definitions of terms; See Technical Report for full development of spacing preference information.

¹Percentage of all preferred distance responses.

²Percentage of all preferred distance responses within the Planning Range.

While the preferences of campers at the three areas differ from each other, the preferences of campers at Joplin are significantly different from those at Brady and Crystal Springs. Spacing in the range of group A (20-39 feet) is greatly disfavored at all three Ouachita activity areas.

Reasons for pleasant/unpleasant experience - Tables 4, 5, and 6 indicate the impact that different factors had on making the camping experience pleasant or unpleasant for users surveyed at the three camping areas surveyed. The responses of the campers surveyed vary greatly from one campground to another. Campers at Brady found their experience to be generally the most pleasant, followed by those at Joplin, and finally those at Crystal Springs. The enforcement of rules and regulations, car parking facilities, and the steepness of slopes were the factors which most often made the experience at Crystal Springs unpleasant. The steepness of slopes, lack of visual privacy, distance from others, and noise were the factors which most often made the experience at Joplin unpleasant.

Table 7 shows the number and percent of campers that indicated they would not return to the activity areas and lists their reasons for not wanting to return.

Tables 8 and 9 indicate the positive and negative changes that campers reported in the physical condition and people's use of the three study camping areas from their previous visit.

Table 4
Reasons Making Recreation Experience Pleasant or Unpleasant--Camping
Brady Mountain Camping Area

Reasons	Percentage* of Users Responding:

Table 7
Number and Percent of Users That Indicated They Would Not
Return to the Activity Area and Their Reasons

Area	Number and percent of users surveyed who indicated they would not return		Reasons for not wanting to return
	#	%	
Brady Mt.	0	0	(None mentioned)
Crystal Springs	3	16%	"Noise - partying all night in overflow area" "Lack of enforcement of rules" "Faucet connector - no provi- sion for screwing on a hose for camper water supply"
Joplin	1	5%	"Sites too close" "No privacy" "Grass/soil in bad condition"

Table 8
Positive and Negative Changes Noticed in the People's Use
of the Area - Items Mentioned by Campers

Area	Positive Changes	Negative Changes
Brady Mt.	(None mentioned)	"More rowdier" (1)
Crystal Springs	"Quieter" (1)	"Crowded" (1)
	"Less crowded" (1)	"Noisier" (1)
	"More people" (1)	"Parking in areas they shouldn't be" (1)
		"Lawlessness" (1)
		"Minor vandalism and thievery" (1)
Joplin	"More campers, fewer tents" (1)	"Overcrowded" (3)
		"Game Warden" (1)
		"Too many cars" (1)
		"Generators on motor homes" (1)

NOTE: The number in parenthesis (#) indicates the number of times the
change was mentioned.

Table 9

Positive and Negative Changes Noticed in the Physical Conditions
of the Area - Items Mentioned by Campers

Area	Positive Changes	Negative Changes
Brady Mt.	"Fewer sites" (4)	"Fewer sites" (3)
	"Bathrooms & showers" (4)	"Have to park on pads" (2)
	"Cleaner/better maintenance" (4)	"Roads in worse condition" (2)
	"Paved roads" (4)	"Walk-in area should have been left as a road" (2)
	"Reseeding" (3)	"Paved pads for tenters" (1)
	"Separate tent camping areas" (3)	
	"More distance between sites" (2)	
	"Designated sites" (2)	
	"Better roads" (1)	
Crystal Springs	"Bathrooms and facilities" (5)	"Best sites for tenting only" (1)
	"Leveling of sites" (1)	
Joplin	"New bathroom facilities" (7)	"Need more garbage cans (trash)" (4)
	"Clean area" (3)	"Wear and tear" (1)
	"Maintenance" (2)	"Noise of sewage pump" (1)
	"Electric, hot and cold water" (1)	"Designated tent areas" (1)
	"Paved road" (1)	"Too many sites removed" (1)
		"Condition of road" (1)

NOTE: The number in parenthesis (#) indicates times change was mentioned.

Acceptability of techniques - Table 10 indicates the acceptability of different techniques for solving problems to the campers surveyed at Ouachita.

The acceptability of most techniques is very clear: at least 60 percent of the respondents agreed on one of the 3 levels of acceptability for 14 of the 22 techniques. But even for those techniques which most respondents found to be acceptable, up to 46 percent found them to be unacceptable. Thus, project management should expect some opposition to any technique used.

In general, the more apparent and widespread that a problem of overcrowding or overuse is, the more likely users may accept a technique which addresses it. Thus, remedial techniques (which solve existing problems) are generally more acceptable than preventative techniques (which correct a problem before it becomes readily apparent).

The more users can understand the rationale and operation of a technique, the more likely they will accept the use of the technique. Education, therefore, would seem to be an important method of improving user acceptance of different techniques.

It also seems as though the more directly a technique impacts only the problem, and the less it operates to diminish recreational opportunities generally, the more likely users will accept the use of the technique. Thus, techniques which can be applied in the short-term or selectively to problem areas are favored (particularly if done in a crisis setting).

Techniques which call for reductions in existing opportunities to use recreational resources and facilities are strongly disfavored. User expectations of the opportunities available are critical in this determination. Consideration should be given initially to avoiding overdeveloping an area with the idea that selective cutbacks in services and facilities can be accomplished later. Users expectations will be based on the initial level, and subsequent reductions will be disfavored.

Table 10
User Acceptability of Techniques--Camping
Lake Ouachita

Techniques	Levels of Acceptability		
	Percentage* of Users Responding:		
	Very Acceptable	Mildly Acceptable	Unacceptable
<u>General Planning Techniques</u>			
Keep major recreation areas more separated	51	19	26
Make vehicle access to areas less convenient	15	13	72
Make area's existence less obvious	13	9	78
<u>Site Planning Techniques</u>			
Redesign area to accommodate fewer users	61	21	16
Design for greater distance between people	62	24	13
Reduce number of parking spaces	33	16	49
Change natural surface by hardening	25	12	63
Change natural surface by paving	44	30	26
Provide landscaped buffers	44	24	31
<u>Management Techniques</u>			
<u>Procedures:</u>			
Require prior reservations	15	18	67
Require permits	4	17	79
Charge/increase fees	10	23	66
<u>Rules and Regulations:</u>			
Impose more rules	13	9	79
Provide stricter enforcement of rules	39	16	46
Close areas when natural resource destruction reaches critical point	84	7	9
Close areas when they become "too full"	84	7	9
Reduce number of activities in same area	37	19	37
Limit number of people in visitor groups	23	19	54
Keep unnecessary vehicles out	70	11	19
<u>Services:</u>			
Provide more and better information	55	29	10
Increase maintenance and restoration	71	20	7
Reduce facilities and services	3	6	91

*Percentages may not total 100% because of those responding "Does Not Apply."

BOATING/WATERSKIING

Orientation

Boating and waterskiing are both popular activities at Lake Ouachita. Although overcrowding is not a problem across the entire lake surface, nodal crowding sometimes occurs. Heavy use areas include the cove areas and the other water areas adjacent to the ramps, camping areas, and marinas. There is no zoning on the lake per se, but "no wake" and "no ski areas" exist. Like most Corps project areas, conflicts exist between boaters and boat fishermen.

The remainder of the findings in this section are based on the User Survey. This survey obtained 30 responses from boaters and waterskiers, who were surveyed predominantly at Brady Mountain, Crystal Springs and Joplin areas.

User characteristics

Table 11 indicates the characteristics of the boaters and waterskiers surveyed at Ouachita. The most significant differences in the characteristics of the boaters and waterskiers who were surveyed at Ouachita from those of other project areas are: 1) the relatively fewer users from nearby areas, and 2) the relatively fewer number of users participating in no or in only one other activity.

Table 11

Boater/Waterskier Characteristics

<u>Age</u>	<u>Percent of Boaters/Waterskiers</u>	<u>Group Size</u>	<u>Percent of Boaters/Waterskiers</u>

*See Appendix A for definitions of terms; see Technical Report for a full development of spacing preference information.

¹Percentage of all preferred distance responses.

²Percentage of all preferred distance responses in the Planning Range.

Reasons for pleasant/unpleasant experience - Table 14 indicates the impact that different factors had on making the boating or water-skiing experience pleasant or unpleasant for the users surveyed at Ouachita. Users found their experience to be generally pleasant. The amount of car parking facilities was the factor which was most frequently unpleasant. No factor was unpleasant enough to cause the boaters and waterskiers surveyed to indicate they would not return.

Tables 15 and 16 indicate the positive and negative changes that boaters/waterskiers reported in the physical condition and people's use of the area from their previous visit.

Table 15

Positive and Negative Changes Noticed in the Physical Conditions of the Area - Items Mentioned by Boaters/Waterskiers

Area	Positive Changes	Negative Changes
Lake (or adjacent areas)	"Cleaner" (2)	"People park cars in center of ramp" (2)
	"New bathrooms" (1)	
	"Everything better" (1)	"Need more picnic tables" (1)

NOTE: The number in parentheses (#) indicates the number of times the change was mentioned.

Table 16

Positive and Negative Changes Noticed in the People's Use of the Area - Items Mentioned by Boaters/Waterskiers

Area	Positive Changes	Negative Changes
Lake	"Less crowded" (1)	"Day users not always stay for just a day" (1)
	"More sailboats" (1)	
		"Rangers too strict" (1)
		"More people" (1)

NOTE: The number in parenthesis (#) indicates the number of times the change was mentioned.

Table 14
Reasons Making Recreation Experience Pleasant or Unpleasant--Boating/Waterskiing
Lake Ouachita

Reasons	Percentage* of Users Responding:		
	Pleasant	Unpleasant	Not Important
<u>General Reasons</u>			
Characteristics and behavior of other people	97	3	-
Distance from other people	90	3	7

Waiting time to launch boat	97	-	-
People in areas they shouldn't be	90	3	-

*Percentages may not total 100% because of those responding "Does Not Apply."

Acceptability of techniques - Table 17 indicates the acceptability of different techniques for solving problems to the boaters and water-skiers surveyed at Ouachita.

The acceptability of most techniques is very clear: at least 60 percent of the respondents agreed on one of the 3 levels of acceptability for 12 of the 17 techniques. But even for those techniques which most respondents found to be acceptable, up to 47 percent found them to be unacceptable. Thus, project management should expect some opposition to any technique used.

Table 17
User Acceptability of Techniques--Boating/Waterskiing
Lake Ouachita

Techniques	Levels of Acceptability		
	Percentage* of Users Responding: Very Acceptable	Mildly Acceptable	Unacceptable
<u>General Planning Techniques</u>

Reduce facilities and services	3	10	87

*Percentages may not total 100% because of those responding "Does Not Apply."

SUNBATHING/SWIMMING

Orientation

Some camping and day-use conflicts occur because of the location of sunbathing/swimming areas (i.e., at Brady Mountain and Crystal Springs). Separate swimming beach areas are currently being planned and designed for both campers and day users. Overuse has been a problem at Crystal Springs. In the past, beaches have been maintained and the sand replenished to solve overuse. Crystal Springs, Joplin, and Brady Mountain are popular and receive very heavy use.

The remainder of the findings of this section are based on the User Survey. This survey obtained 41 responses from sunbathers and swimmers at Brady Mountain, Crystal Springs, and Joplin recreation areas.

User characteristics

Table 18 indicates the characteristics of the sunbathers and swimmers surveyed at Ouachita. The only significant difference in the characteristics of the sunbathers and swimmers surveyed at Ouachita from those of other study project areas are in travel time.

Table 18

Joplin	100	100	0	0	0

*See Appendix A for definitions of terms; See Technical Report for a full development of spacing preference information.

¹Percentage of all preferred distance responses.

²Percentage of all preferred distance responses in Planning Range.

Most of the differences between the percentages for the different activity areas can most likely be attributed to the small sample sizes for sunbathing at Joplin and for swimming at Brady Mountain and Joplin. In general, the sunbathers and swimmers surveyed at Ouachita preferred somewhat closer spacing than those surveyed at other project areas.

Reasons for pleasant/unpleasant experience - Tables 21, 22, and 23 indicate the impact that different factors had on making the experience of the sunbathers and swimmers surveyed pleasant or unpleasant at the three areas. The responses vary greatly from one area to another.

Sunbathers and swimmers at Brady Mountain generally found their experience to be pleasant, with only the condition of the grass or soil causing unpleasantness in a significant number of cases.

Sunbathers and swimmers at Joplin also generally found their experience to be pleasant, with only the amount of parking facilities causing unpleasantness in a significant number of cases.

However, sunbathers and swimmers at Crystal Springs found their experience to be more frequently unpleasant than those at the other two areas. Car parking facilities, crowding and noise were the major unpleasant factors, but all the factors seemed unpleasant to at least one user.

Table 24 shows the number and percentage of sunbathers/swimmers that indicated they would not return to the activity area and their reasons.

Table 25 indicates the positive and negative changes that sunbathers/swimmers reported on the physical condition of the three areas surveyed from the previous visit (no changes were reported regarding people's use of the areas).

BOAT LAUNCHING

Orientation

The Crystal Springs, Joplin and Brady Mountain launch ramps are heavily used because of their location. Although the ramps are 6-lanes wide, each lane is not individually marked. Inadequate parking and circulation limits the usefulness of the ramps and sometimes results in overcrowding. Courtesy docks are not provided. In regard to overuse, compaction, erosion, and damage to ground cover is most likely to occur at the shoreline areas between the hardened surfaces (parking and ramp) and the water.

The remainder of the findings in this section are based on the User Survey. This survey obtained 20 responses from boat launchers at the Brady Mountain and Crystal Springs ramps.

User characteristics

Table 27 indicates the characteristics of the boat launchers surveyed at Ouachita.

Table 27

User opinions

Preferred waiting times - The average (preferred) time to launch a boat at the Crystal Springs and Brady Mountain ramps were 6 and 11 minutes, respectively.

Reasons for pleasant/unpleasant experience - Tables 28 and 29 indicate the impact that different factors had on making launching pleasant or unpleasant at the two ramps surveyed. While the percentages of responses differ between the two areas, in most cases these differences are not significant. However, the amount of car parking facilities seemed to have been unpleasant more frequently at Brady Mountain than at Crystal Springs. People being in areas where they shouldn't be (beach users) also caused unpleasantness to boat launchers in a significant number of cases at Brady Mountain. One respondent indicates that he would not return to the Crystal Springs ramp because of the parking problem. Tables 30 and 31 show the positive and negative changes from their previous visit mentioned by the Brady Mt. and Crystal Springs boat launchers.

PICNICKING

Orientation

Picnickers were interviewed at the spillway area. This day use area is popular undoubtedly because it is located adjacent to an attractive and popular sailboating area and it is comparatively close to the City of Hot Springs. The area has moderately steep slopes and is wooded. Some soils are compacted, but overuse is not a major problem. Many other picnic areas are located at the lake; small picnic areas with only a few tables are provided within some camping areas (e.g., Joplin).

The remainder of the findings made in this section are based on the User Survey. This survey obtained 10 responses from picnickers at the Spillway Day Use Area.

User characteristics

Table 33 indicates the characteristics of the picnickers surveyed at Ouachita. The most significant differences in the characteristics of the picnickers surveyed at Ouachita from those of other study project areas are: 1) the relatively fewer older users, 2) the relatively fewer large groups, 3) the relatively greater number of users from close by locations, and 4) the relatively greater number of users who participate in no other activity or in only 2 other activities.

Table 33

Picnicker Characteristics

*See Appendix A for definitions of terms; See Technical Report for a full development of spacing preference information.

¹Percentage of all preferred distance responses.

²Percentage of all preferred distance responses in the Planning Range.

Reasons for pleasant/unpleasant experience - Table 36 indicates the impact that different factors had on making the picnic experience pleasant or unpleasant for users surveyed at the spillway area. The factors most frequently contributing to an unpleasant experience were convenient to facilities and nearness to the water body, while noise was also a significant contributing factor to unpleasantness. All 10 respondents reported there were no factors unpleasant enough to prevent them from coming back.

Table 36
Reasons Making Recreation Experience Pleasant or Unpleasant--Picnicking
Spillway

	Percentage of Users Responding:		
	Pleasant	Unpleasant	Not Important
<u>General Reasons</u>			
Characteristics and behavior of other people	100	-	-
Distance from other people	90	10	-

Condition of grass or soil	100	-	-
<u>Water-Based Reasons</u>			
Water quality	100	-	-

*Percentages may not total 100% because of those responding "Does Not Apply."

Acceptability of techniques - Table 37 indicates the acceptability of different techniques for solving problems to the picnickers surveyed at Ouachita.

The acceptability of most techniques is very clear: at least 60 percent of the respondents agreed on one of the 3 levels of acceptability for 16 of the 21 techniques. But even for those techniques which most respondents found to be acceptable, up to 40 percent found them to be unacceptable. Thus, project management should expect some opposition to any technique used.

Table 51
User Acceptability of Techniques--Picnicking
Lake Ouachita

Techniques	Levels of Acceptability		
	Percentage* of Users Responding:

BOAT FISHING

Orientation

Boat fishing is very popular at Lake Ouachita, especially in the Spring and Fall. The more popular areas include the areas near Crystal Springs, Joplin, Little Fir, and Twin Creek. Some conflicts occur between boat fishermen and boaters/waterskiers. "No wake" and "no ski" areas exist at some of the coves and standing timber was allowed to remain in most of the narrow inlets of the lake.

The remainder of the findings of this section are based on the User Survey. This survey obtained 23 responses from boat fishermen who were surveyed predominantly in the areas of the lake near Highway 27 and Little Fir areas.

User characteristics

Table 38 indicates the characteristics of the boat fishermen surveyed at Ouachita. The most significant differences in the characteristics of the boat fishermen who were surveyed at Ouachita from those of other project areas are: 1) the relatively greater proportion of older users, 2) the relatively fewer users from nearby locations, and 3) the relatively fewer number of users participating in no other activities or in four or more activities.

Table 38

All Boat Fishermen Surveyed	91%	49%	27%	24%
Ouachita	91	43	33	24

*See Appendix A for definitions of terms; See Technical Report for a full development of spacing preference information.

¹Percentage of all preferred distance responses.

²Percentage of all preferred distance responses in Planning Range.

Reasons for pleasant/unpleasant experience - Table 41 indicates the impact that different factors had on making the boat fishing experience pleasant or unpleasant for the users surveyed at Ouachita. Users found their experience to be generally pleasant. The amount, size, and type of fish being caught was the factor which was most frequently unpleasant. Tables 42 and 43 show the positive and negative changes reported by boat fishermen in the physical conditions and people's use of the area from their previous visit.

Table 42

Positive and Negative Changes Noticed in the Physical Conditions of the Area - Items Mentioned by Boat Fishermen

Area	Positive Changes	Negative Changes
Lake (and/or adjacent area)	"More picnic tables" (1)	"Fishing bad" (8)
	"Water high" (1)	"High water" (1)
	"Better and bigger boats being used" (1)	"Fewer trees" (1)
		"More ramps brought more boats" (1)
		"Less underwater cover" (1)
		"Put in big ramp at Little Fir" (1)

NOTE: The number in parenthesis (#) indicates the number of times the change was mentioned.

Table 43

Positive and Negative Changes Noticed in the People's Use of the Area - Items Mentioned by Boat Fishermen

Area	Positive Changes	Negative Changes
Lake (and/or adjacent area)	(None mentioned)	"Local people greedy" (1)
		"Crowded" (1)
		"Fewer fish" (1)

NOTE: The number in parenthesis (#) indicates the number of times the change was mentioned.

Table 41
Reasons Making Recreation Experience Pleasant or Unpleasant--Boat Fishing
Lake Ouachita

Reasons	Percentage* of Users Responding:		
	Pleasant	Unpleasant	Not Important
<u>General Reasons</u>			
Characteristics and behavior of other people	87	13	-
Distance from other people	92	4	4
Number of people in other visitor groups	91	-	9
Number and type of other activities occurring here	95	-	5
Scenic views	100	-	-
Noise	100	-	-
Accidents or near accidents	96	4	-

Catching fish	55	45	-
People in areas they shouldn't be	95	5	-

*Percentages may not total 100% because of those responding "Does Not Apply."

Acceptability of techniques - Table 44 indicates the acceptability of different techniques for solving problems to the boat fishermen surveyed at Ouachita.

The acceptability of some techniques is very clear: at least 60 percent of the respondents agreed on one of the 3 levels of acceptability for 7 of the 17 techniques. But even for those techniques which most respondents found to be acceptable, up to 48 percent found them to be unacceptable. Thus, project management should expect some opposition to any technique used.

Table 44

PART 3: ANALYSIS OF SELECTED
PROBLEMS/SITUATIONS

PART 3: ANALYSIS OF SELECTED PROBLEMS/SITUATIONS

This final section identifies and examines selected problems and situations at Lake Ouachita. The section is not intended to provide solutions to all project area problems. Nor is it a substitute for project area master planning. The solutions/techniques are intended to be only suggestions for further consideration by project area personnel, for they are most familiar with the intricacies associated with these problems.

In many cases, the project area staff is already aware of these problems or situations and is in the process of dealing with them. And in some cases, the solutions/techniques listed in Table 45 may not be practical or possible because of management, budget, or other constraints.

Table 45
Analysis of Selected Problems/Situations

Area/Subject	Problem/Situation	Possible Solutions/Techniques
Crystal Springs & Joplin Recreation Areas	Overuse--The steep terrain & shallow soil are extremely susceptible to erosion. The steep slopes & narrow fingers make circulation difficult in Joplin. Overuse is evident at Joplin & Crystal Springs. Unlike at Brady Mt., reseeding, fertilizing & restoration efforts have met with marginal success at Joplin & Crystal Springs Recreation Areas because of the more random traffic movement.	<ul style="list-style-type: none"> • eliminate random traffic movement. • provide hardened pads (gravel or paved) camp pads or "impact sites." • continue reseeding/fertilizing with hydroseeder. • continue restoration efforts. • monitor use and, when necessary, close down areas or parts of areas until restored. • provide walk-in tenting areas in the more sensitive locations. • provide better site delineation.

Area/Subject	Problem/Situation	Possible Solutions/Techniques
		<ul style="list-style-type: none"> o evaluate reducing the number of campsites o determine the areas social and resource capacity & manage accordingly. o See Figures 1, 2 and 3 at the end of Part 3 which show example concept plans which might help solve overuse & overcrowding at Joplin Recreation Area if implemented. Special features are noted directly on each plan.
Crystal Springs & Joplin Recreation Areas	<u>Overcrowding</u> was observed & reported at both Joplin & Crystal Springs during the user survey.	<ul style="list-style-type: none"> o provide more information, directions, & signs to encourage recreators to use other project recreation areas. o separate camping and day use activities. o determine social capacity & close gate when areas get full. o provide better site delineation o provide open space corridors (like at Brady Mt.) along the lake shore
Brady Mountain	<p>Some of the campers surveyed felt that "<u>too many</u>" sites were <u>removed</u></p> <p>Some trailer campers complain about <u>tenters usurping trailer spots</u>.</p> <p><u>Overflow area</u> is used on a fee basis, even when regular campground is not totally full.</p>	<ul style="list-style-type: none"> o consider adding a few more sites when the occasion arises (e.g., old sites wear out) o provide more separate locations for tent campers o encourage campers to use other project area campgrounds, instead of overflow areas. o provide stricter enforcement (e.g., require overflow campers to move to regular sites as they become available)
Denby Point	<u>Underuse</u> --historically this recreation area has always been underused because of its comparatively remote location, trees (less security), wind conditions, situation away from lake.	<ul style="list-style-type: none"> o encourage more use through more directions, signs, & information o urge overflow campers at Joplin, Brady Mt., & Crystal Springs to use Denby Point. o monitor use levels & talk with campers about possible improvements

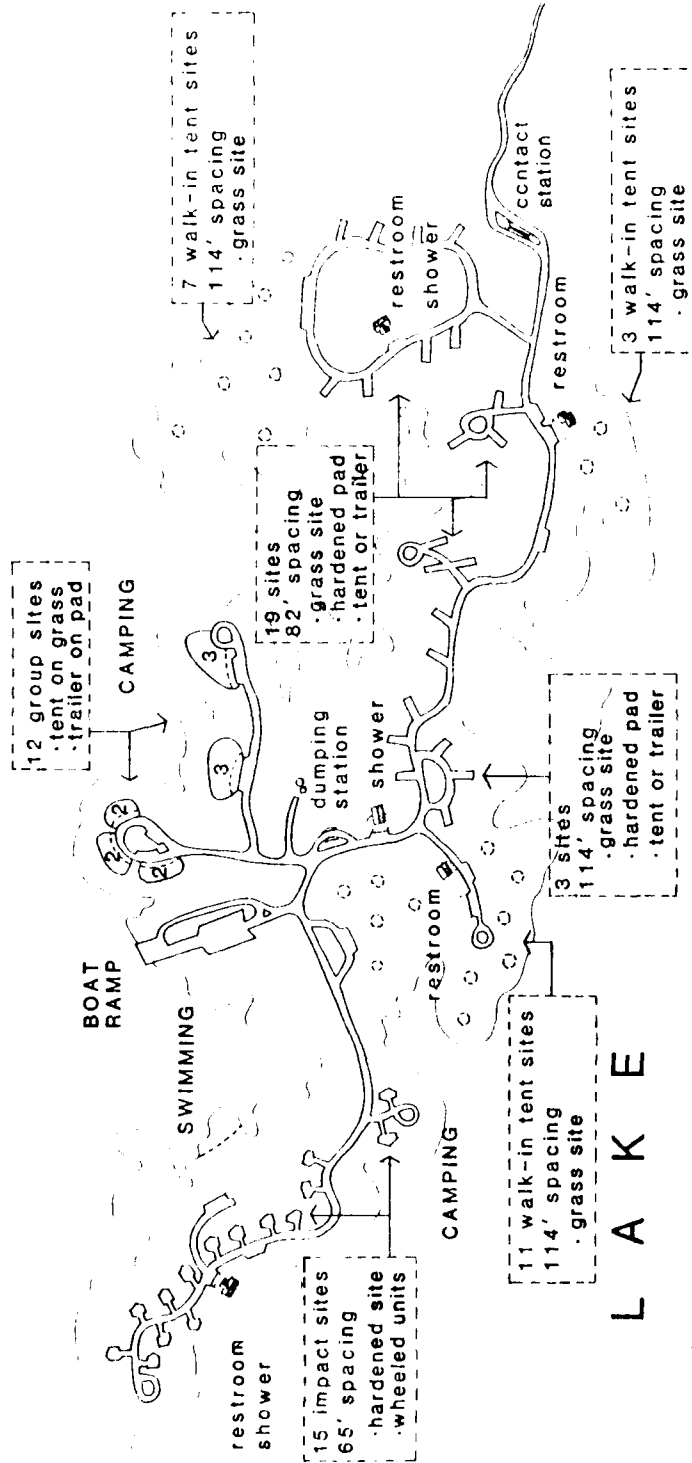

Figure 1. Joplin Recreation Area, Plan 1

L A K E

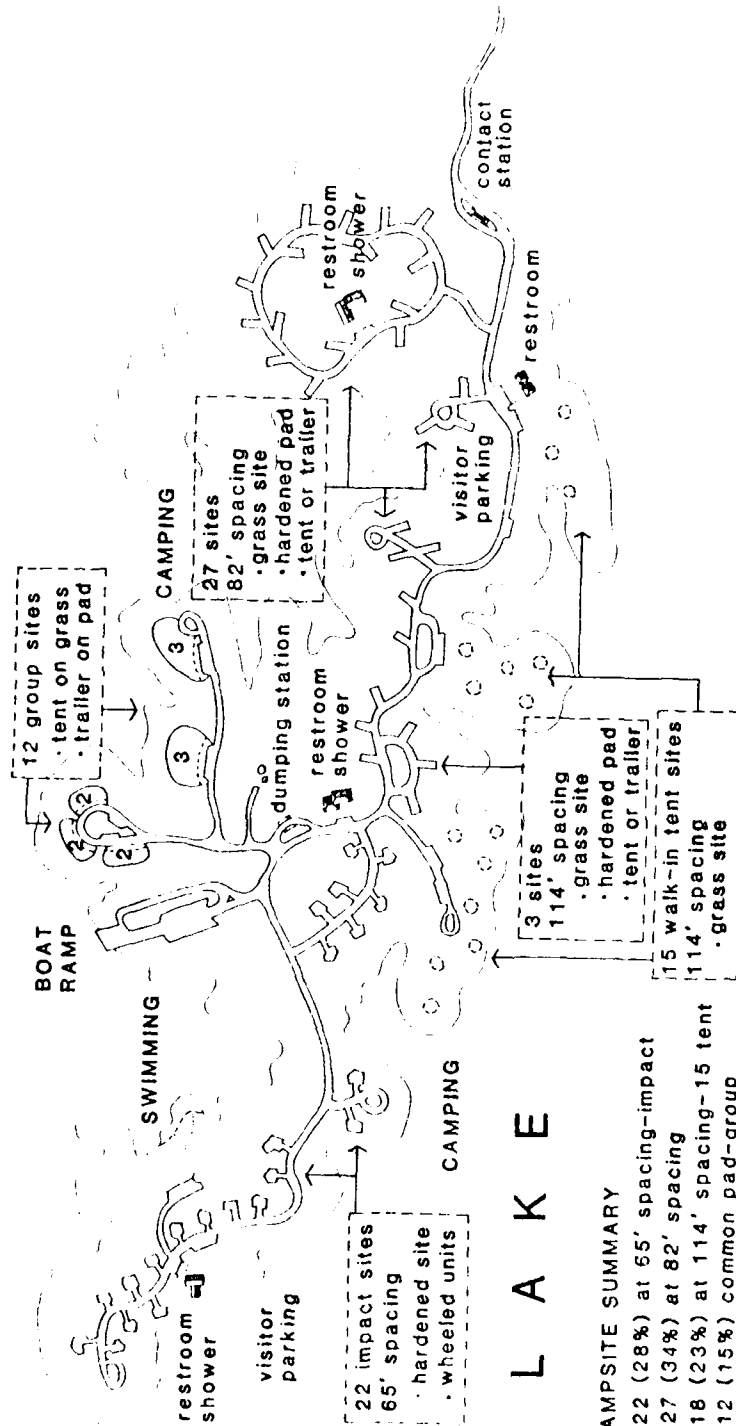

CAMPSITE SUMMARY

15 (21%) at 65' spacing - Impact sites
 19 (27%) at 82' spacing
 24 (35%) at 114' spacing - 21 walk-in tent
 12 (17%) common pad - group
 70 (100%)

Figure 2. Joplin Recreation Area, Plan 2

CAMP SITE SUMMARY

22 (28%) at 65' spacing-impact
 27 (34%) at 82' spacing
 18 (23%) at 114' spacing-15 tent
 12 (15%) common pad-group
 79 (100%)
 preferred distribution
 without group sites
 22 (34%) at 65' spacing-impact
 27 (40%) at 82' spacing
 18 (26%) at 114' spacing-15 tent
 67 (100%)

Figure 3. Joplin Recreation Area, Plan 3

Area/Subject	Problem/Situation	Possible Solutions/Techniques
Crystal Springs Boat Launching Ramp	<u>Overcrowding & congestion</u> at boat ramps.	<ul style="list-style-type: none"> o provide more improvements (e.g. electric hookups?) o designate parking spaces more formally o enforce parking regulations more strictly o add gate & close it when area gets full. Allow people in a people leave. o on holiday weekends provide ranger to direct traffic & circulation o See Figure 4, which demonstrates ways the carrying capacity at a launch ramp might be increased
Crystal Springs Beach/Campground	<u>User Conflicts</u> --were observed & reported between campers & users of the swimming beach.	<ul style="list-style-type: none"> o develop separate day use beach/area outside of campground o close gate when area gets "too full" o enforce parking regulations (none on grass or on campsites)
Crystal Springs overflow camping	<u>Overflow</u> leg--poorly developed. The few sites can only provide marginal usefulness when overflow occurs.	<ul style="list-style-type: none"> o re-examine costs & benefits of area; consider closing to allow vegetation to regrow & act as more effective buffer between camping area & launch ramp.
Lake	<u>Conflicts</u> between water-skiers & boat fishermen; boaters speeding too close to shore.	<ul style="list-style-type: none"> o continue to identify "no ski" and "no wake areas" o consider using floating "ski docks" to attract skiers to appropriate areas on the lake o encourage waterskiers & power boaters to stay a certain distance from shore (this may also reduce shoreline erosion) o provide more information to boaters, waterskiers & boat fishermen regarding this problem & their role in helping to achieve pleasant recreation experiences o provide strict enforcement of regulations

Figure 4

Area/Subject	Problem/Situation	Possible Solutions/Techniques
Lake	Underwater <u>obstructions</u> .	o continue to place warning buoys & identify obstructions.
Picnicking	<u>Few areas</u> are available for picnicking.	o examine the demand for picnicking at Lake Ouachita. o provide picnic areas at accessible locations closest to potential users. o provide for a variety of picnicking activities (e.g. family, small group, large groups).
Beaches	<u>Few improved beaches</u> are provided for swimming/sunbathing; erosion has been a problem at some of the beaches.	o provide more improved swimming areas at better locations. o provide separate beach areas for campers & day users o continue to maintain beaches, replenish sand, & divert drainage away from beaches
Hiking	During the User Survey, the three hiking trails appeared underused.	o provide more directional signs to the trails. o make more people aware of these trails o consider providing additional trails which link activity areas together.

APPENDICES

APPENDIX A: KEY TERMS

1. Activity area - The specific area where an individual primary activity occurs (e.g., a campground, the lake, a hiking trail, a picnic area, etc.).
2. Capacity, recreational carrying - The capability of a recreational resource to provide opportunity for certain types of satisfactory recreation experiences over time without significant degradation of the resource. Inherent in this view of carrying capacity are resource (bio-physical) and social (psycho-social) capacities.
3. Capacity, resource - The level of recreational use of a resource beyond which irreversible biological deterioration takes place or degradation of the physical environment makes the resource no longer suitable or attractive for that recreational use.
4. Capacity, social - The level of recreational use of a resource or area beyond which the user's expectation of the experience is not realized and he/she does not achieve a reasonable level of satisfaction.
5. Carrying capacity guidelines - The levels of use and the methods used to obtain and achieve them which are recommended in this report.
6. Factors - The characteristics and phenomena which influence carrying capacity.
7. Indicators - The phenomena which can be used to identify or measure the degree of overcrowding or overuse, and which can be used in conjunction with a monitoring system to help predict when problems of overuse and overcrowding will occur if preventive measures are not taken.
8. Management/site survey - The initial survey conducted at the study project areas where resource managers, rangers, and maintenance personnel were interviewed and a reconnaissance was made of "overused," "overcrowded," "underused," and "well-balanced" recreation areas. (See Appendix B)
9. Mean - The measure of central value defined as the sum of all observations divided by the number of observations.
10. Median - The measure of central value defined as the point on the scale of observations which is the middle observation (if there is an odd number of cases) or which is the mean of the two central observations (if there is an even number of cases).
11. Mode - The measure of central value defined as the observation with the largest frequency.
12. Monitoring - The periodic assessment of the impact that use levels have on the social capacity or resource capacity of an area.
13. Overcrowding - A condition where the user does not achieve a satisfactory recreational experience because of too many people, inadequate distances between sites, etc.

14. Overuse - A condition where (during the course of a season/year) degradation of the physical environment makes the resource no longer suitable or attractive for recreational use.

15. Planning range - The range of spacing distances for an activity which satisfies the spacing preferences of the majority of recreators participating in that activity, which at the same time accounts for other considerations (e.g., cost, safety, equity, etc.).

16. Preference distribution - The set of preference groupings for an activity which can be modified to develop the social carrying capacity of an area.

17. Preference groupings - The range of spacing distances for an activity which satisfies the similar spacing preferences of a group of recreators participating in that activity.

18. Primary activity - The major recreation activity which brought the visitor to the recreation area.

19. Project area - The land and water area of the total Corps of Engineers Project.

20. Project management - The project area staff, district personnel, and other people involved with project area management.

21. Recreation area - Corps-managed areas specifically identified for recreational use within the total Project Boundary; usually named.

22. Recreation day - A standard unit of use consisting of a visit by one individual to a recreation development or area for recreation purposes during any reasonable portion or all of a 24-hour period.

23. Recreation environment - An activity area together with its various recreation settings.

24. Recreation resource - The land and/or water areas, with associated facilities, which provide a base for outdoor recreation activities.

25. Recreation setting - The physical, development/control, activity/use relationship components of an activity area; taken as a whole, the various settings comprise a particular "recreation environment" for each activity area.

26. Recreation unit - A campsite, picnic table, boat, off-road vehicle, user group, or other unit which when spaced together with other units represents a use level or density.

27. Representative recreation setting - The most typical recreation setting for a particular activity.

28. Secondary activities - Incidental activities; activities which are supplemental to the primary activity.

29. Study activity area - An activity area at which the management/site survey and the user survey was conducted.

30. Study project area - One of the 11 project areas at which the management/site survey and the user survey were conducted. These project areas are: Barkley Lock and Dam, Benbrook Lake, Hartwell Lake, McNary Lock and Dam, Milford Lake, New Hogan Lake, Lake Ouachita, Lake Shelbyville, Shenango River Lake, Somerville Lake, and Surry Mountain Lake.

31. Title 36 - Part 327, Chapter III, of Title 36 of the Code of Federal Regulations which provides rules and regulations governing the public use of water resource development projects administered by the Army Corps of Engineers.

32. Underuse - A condition where use levels are significantly less than their potential service level.

33. User survey - The survey that provided user preference information used in developing social capacity guidelines; information was obtained from users at the study project areas by means of a questionnaire (see Appendix B).

34. Well-balanced use - A condition which exhibits just the right amount of use to satisfy users and protect the resource.

APPENDIX B: EXAMPLE SURVEY FORMS

This Appendix includes on the following pages examples of the survey forms that were used during the Management/Site Survey and the User Survey.

MANAGEMENT/SITL SURVY

PICNICKING QUESTIONNAIRE

(Resource Manager, Head Ranger, Maintenance Foreman)

Project Area Name _____

6. INDICATORS OF OVERUSE/DEGRADATION

Indicators	Assign relative importance using a numerical rating on a scale of 1 (least) to 10 (most)	Comments
o Ground cover wearing away _____		
o Damaged trees and/or undergrowth _____		
o Absence/change in wildlife _____		
o Increased erosion/sedimentation _____		
o Little deadfall _____		
o Compacted soils _____		
o Increased litter/trash _____		
o Trees cut down _____		
o Increased runoff _____		
o Need for replacement of support facilities before normal life period _____		
o Rodent infestation _____		
(Please list others below)		
o		
o

o		

2. FACTORS AFFECTING RESOURCE CARRYING CAPACITY

Picnicking

Assign relative importance
using a numerical
rating on a scale of

1 (least) to 10 (most)

Factors

Comments

- o Resiliency of vegetation type _____
- o Resiliency of soils _____
- o Resiliency of wildlife _____
- o Degree of normal maintenance applied _____
- o Degree of off-season restoration applied _____
- o Site drainage _____
- o Slope/topography _____
- o Climate/micro-climate _____
- o Group size _____
- o Slope orientation _____
- o Tree cover _____
- o Level of development (e.g. paved roads/paths vs. unpaved roads/paths) _____

(Please list others below)

o
o
o

8. FACTORS AFFECTING SOCIAL CARRYING CAPACITY

Assign relative importance
using a numerical
rating on a scale of
1 (least) to 10 (most)

Comments

Factors

- o Similarity of visitor groups _____
- o Slope orientation _____
- o Distance from highway access _____
- o Proximity to the water _____
- o Scenic views or vistas _____
- o Quality/variety of natural amenities _____
- o Number, type, and degree of man-made intrusions or disturbances (power lines, buildings, etc.) _____
- o Visual screening between picnickers _____
- o Density/type of vegetation _____
- o Distance between picnic sites _____
- o Degree of designation _____
- o Level of support facilities _____
- o Proximity to support facilities _____
- o Size of picnicking area _____
- o Charging of fees _____
- o Compatibility of nearby primary activities _____
- o Single purpose or multi-purpose recreation area _____
- o Distance traveled _____
- o Frequency of visits _____
- o Origin of user (urban, suburban, rural) _____
- o Configuration of area _____
- o Degree of maintenance _____

(Please list other factors)

o
o

9. PRESENT/PAST CAPACITY MANAGEMENT

The areas where capacity management techniques were, or are now, applied (Name)	Past <u>(✓)</u>	Present <u>(✓)</u>	List capacity management techniques(s) used	Describe level of effectiveness (pros/cons regarding visitor satisfaction and resource protection)	Picnicking	Assessment of management feasibility (pros/cons why the technique could or could not be implemented)

CORPS OF ENGINEERS USER CAPACITY SURVEY

Notations ☐

Date _____ Day _____ OMB Clearance # 49-R0419
 Time (hour) _____ Expires October 1983
 Weather _____ Project Area Name _____
 Interviewer _____ Recreation Area Name _____
 Activity _____ Code _____ Activity Area _____ Code _____

We are conducting a survey for the Army Corps of Engineers at selected Corps recreation areas throughout the Country. Through these surveys, we will discover how visitors feel about overcrowding and overuse of these recreation areas. The Corps will use this information to help make decisions about the use and protection of its recreation areas. Would you be willing to take fifteen minutes of your time to answer some questions about your visit here?

BASIC VISITOR CHARACTERISTICS

- | | | | |
|-------------------------------------|-------------------------------|---|--|
| 1. In which category is your age? | 2. How large is your group? | 3. Is this your main destination or a stopover on a trip? | 4. How long did it take you to travel here from your home (✓) or last destination (✓)? |
| 17 & under <input type="checkbox"/> | 1 <input type="checkbox"/> | Main destination <input type="checkbox"/> | Under 15 minutes <input type="checkbox"/> |
| 18 - 25 <input type="checkbox"/> | 2 <input type="checkbox"/> | Stopover on trip <input type="checkbox"/> | 15-30 minutes <input type="checkbox"/> |
| 26 - 40 <input type="checkbox"/> | 3- 4 <input type="checkbox"/> | | 30 min. - 1 hour <input type="checkbox"/> |
| 41 - 55 <input type="checkbox"/> | 5- 8 <input type="checkbox"/> | | 1 - 2 hours <input type="checkbox"/> |
| 56 - 65 <input type="checkbox"/> | 9-12 <input type="checkbox"/> | | 2 - 3 hours <input type="checkbox"/> |
| 66 & over <input type="checkbox"/> | 13+ <input type="checkbox"/> | | 3 - 5 hours <input type="checkbox"/> |
| | | | 5+ hours <input type="checkbox"/> |

VISITOR PARTICIPATION

- | | | |
|---|--|--|
| 5. How many times did you participate in this activity anywhere last year? (if "0", go to Question 7) | 6. How many times have you participated in this activity at this Lake? | 7. How long are you staying on this visit? |
| 0 <input type="checkbox"/> | a) Last year! 0 <input type="checkbox"/> | 1 - 4 hours <input type="checkbox"/> |
| 1 - 5 <input type="checkbox"/> | 1- 2 <input type="checkbox"/> | 5 - 8 hours <input type="checkbox"/> |
| 6 - 10 <input type="checkbox"/> | 3- 4 <input type="checkbox"/> | 1 day(overnight) <input type="checkbox"/> |
| 11 - 20 <input type="checkbox"/> | 5- 7 <input type="checkbox"/> | 2 days <input type="checkbox"/> |
| 21 - 30 <input type="checkbox"/> | 8-10 <input type="checkbox"/> | 3 days <input type="checkbox"/> |
| 31+ <input type="checkbox"/> | 11-19 <input type="checkbox"/> | 4 days <input type="checkbox"/> |
| | 20+ <input type="checkbox"/> | 5 - 7 days <input type="checkbox"/> |
| | | 8 or more days <input type="checkbox"/> |

8. Have you participated in this activity at this specific location anytime before this visit?

No ☐ Yes ☐ Please list any changes you have noticed in the physical condition of (go to #9) this location or in people's use of the area.

Physical condition:

☐ Positive _____

☐ Negative _____

People's use of the area:

☐ Positive _____

☐ Negative _____

9. Would you say the number of people who are now participating in this activity are:

too many ☐ too few ☐ just the right number ☐

10. a) Would you say that the distance between you and other people is:

too far ☐ (to 10c) just right ☐ (to 10c) too close ☐

(Actual or estimated distance to be recorded by interviewer _____)

b) If other people are too close, how far away would you like them to be? ☐ Not Applicable

just a little ☐ twice as far ☐ three times ☐ more than ☐
farther farther 3 times

c) What is the closest distance you would accept? _____

d) What distance would you like them to be? _____

11. a) Which of the following reasons are making your present activity at this location pleasant or unpleasant?

Un- Not Does Not
Pleasant pleasant Important Apply

GENERAL REASONS

1. Characteristics and behavior of other people.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2. Distance from other people.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3. Number of people in other visitor groups.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4. Number and type of other activities occurring here.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5. Fees charged.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6. Scenic views.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
7. Noise.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8. Accidents or near accidents.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9. Enforcement of rules/regulations.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
10. Car parking facilities.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
11. Theft.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
12. Vandalism.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Others.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

LAND-BASED REASONS

13. Trees/natural landscape.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
14. Visual privacy from other people.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
15. Amount of facilities (restrooms, water, etc.)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
16. Convenience to facilities (restrooms, water, etc.)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
17. Nearness to the water body.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
18. Steepness of slopes.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
19. Maintenance of facilities.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
20. Condition of trees and landscape.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
21. Condition of grass or soil.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Others.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WATER-BASED REASONS

22. Water quality.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
23. Catching fish.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
24. Formal designation of places for your activity.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
25. Waiting time to launch boat.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
26. Waiting time to retrieve boat.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
27. People in areas they shouldn't be.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Others.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

b) Will any of the above reasons prevent you from coming here again?

No ☐ Yes ☐

If yes, which reasons (selected from reasons checked "unpleasant" above)?

12. If recreation areas have too many people for each to enjoy the activity or if areas become damaged by too much use, there are some solutions for reducing that overcrowding or overuse. Please indicate which of the following possible solutions you would find very acceptable, mildly acceptable, or unacceptable for reducing crowding and/or natural resource destruction in this location. (If this location is not overcrowded or overused, assume that it is for this question.)

	Very Accept- able	Mildly Accept- able	Un- accept- able	Does Not Apply
--	-------------------------	---------------------------	------------------------	----------------------

POSSIBLE SOLUTIONS FOR OVERCROWDING OR OVERUSE

- PUBLIC AWARENESS/EASE OF ACCESS SOLUTIONS
1. Make vehicle access to areas less convenient. ☐ . . . ☐ . . . ☐ . . . ☐ .
 2. Make the area's existence less obvious to the general public
(fewer signs and directions) ☐ . . . ☐ . . . ☐ . . . ☐ .
 3. Provide more and better information on how to use the area . . . ☐ . . . ☐ . . . ☐ . . . ☐ .

ACTIVITY RELATIONSHIPS & USE DENSITY

4. Keep major recreation activities more separated from one another. ☐ . . . ☐ . . . ☐ . . . ☐ .
5. Reduce the number of different activities occurring in the same area. ☐ . . . ☐ . . . ☐ . . . ☐ .
6. Design for greater distance between people ☐ . . . ☐ . . . ☐ . . . ☐ .
7. Limit the number of people in each group ☐ . . . ☐ . . . ☐ . . . ☐ .
8. Change natural surfaces by hardening them to withstand more use. ☐ . . . ☐ . . . ☐ . . . ☐ .
9. Increase maintenance and restoration to allow more use . . . ☐ . . . ☐ . . . ☐ . . . ☐ .

PLANNING & DESIGN SOLUTIONS

10. Reduce the type and number of facilities and services provided ☐ . . . ☐ . . . ☐ . . . ☐ .
11. Keep unnecessary vehicles out of areas ☐ . . . ☐ . . . ☐ . . . ☐ .
12. Reduce number of parking spaces to limit number of users . . . ☐ . . . ☐ . . . ☐ . . . ☐ .
13. Provide landscaped buffers between visitor groups to increase privacy ☐ . . . ☐ . . . ☐ . . . ☐ .
14. Redesign area to accommodate fewer users ☐ . . . ☐ . . . ☐ . . . ☐ .

RULES & REGULATIONS SOLUTIONS

15. Have stricter enforcement of regulations ☐ . . . ☐ . . . ☐ . . . ☐ .
16. Impose more rules and regulations. ☐ . . . ☐ . . . ☐ . . . ☐ .
17. Require prior reservations to use areas. ☐ . . . ☐ . . . ☐ . . . ☐ .
18. Require permits to use areas ☐ . . . ☐ . . . ☐ . . . ☐ .
19. Close down areas when natural resource destruction reaches critical point ☐ . . . ☐ . . . ☐ . . . ☐ .
20. Charge fees or increase fees now charged ☐ . . . ☐ . . . ☐ . . . ☐ .
21. Close gates when areas get "too full". ☐ . . . ☐ . . . ☐ . . . ☐ .

OTHERS

- _____ ☐ . . . ☐ . . . ☐ . . . ☐ .
- _____ ☐ . . . ☐ . . . ☐ . . . ☐ .
- _____ ☐ . . . ☐ . . . ☐ . . . ☐ .
- _____ ☐ . . . ☐ . . . ☐ . . . ☐ .

13. Please answer the following questions about your other recreation activities on this visit.

b) Are they within walking distance or driving distance from this location? (use launching location for boat activities)

a) What are your other recreation activities on this visit? (1) Walking distance (2) Driving distance c) What is your main recreation activity on this visit?

1. Camping	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2. Boating	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3. Waterskiing	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4. Swimming	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5. Sunbathing	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6. Picnicking	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
7. Shoreline fishing	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8. Boat fishing	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9. Biking	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
10. Horseback riding	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
11. Off-road vehicle riding	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
12. _____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
13. _____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
14. _____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

APPENDIX C: PROJECT AREA DESCRIPTION

Location

Lake Ouachita (Vicksburg District) is located on the Ouachita River in West Central Arkansas. The dam and powerhouse are situated 13 miles northwest of Hot Springs, Arkansas.

Authorization and purpose

The Blakely Mountain Dam and Reservoir was authorized by the Flood Control Act of 1944 for the purposes of flood control and hydro-electric power generation.

Project area size and features

The drainage area above the dam is 1105 square miles. At the average recreational pool elevation of 578 feet msl, the lake has a surface area of 40,060 acres and a 690-mile shoreline. Project land acreage at this elevation is 42,313 acres. Total project land and water acreage amounts to 82,373 acres. Fluctuation of the water level during the summer recreation season may be as great as eight feet.

Corps personnel assigned to the project area include a Resource Manager, two full-time rangers, and clerical and maintenance personnel. Additional rangers are hired on a temporary basis during the summer recreation season.

Topography

The reservoir lies within the Ouachita Mountains, and the topography of the land surrounding the lake ranges from hilly to rugged. Well-defined ridges range in elevation up to 1250 feet msl on the southern shore. The northern shore is less rugged. Water courses flow generally northerly or southerly toward the lake.

Climate

The climate of the region is characterized by short moderate winters and long summers. Normal temperatures range from the mid-90 degrees F. (with extremes to 110 degrees F.) in summer to the mid-30 degrees F. (with extremes to -10 degrees F.) in the winter. Average annual temperature is 62 degrees F. Prevailing winds are from the south-

west at about eight mph. The average rainfall is approximately 51 inches, with an average of six inches of snow. Precipitation is well distributed throughout the year and is ample for plant growth. The days are sunny 65 percent of the year, although 75 percent of the days are sunny during the summer.

Soils and vegetation

Soils in the area are shallow, and are composed of gravelly and sandy clay loams generally underlain by shale. The steep terrain of the area makes the shallow soil especially susceptible to erosion.

The area is forested with a heavy second-growth mixture of pine-hardwoods, with the shortleaf pine being the predominant species. Hardwoods include a mixture of oaks, sweet gum, blackgum, and hickory. Greenbrier, French mulberry, strawberry bush, and huckleberry are also scattered throughout the project area.

Fish and wildlife

The lake has provided excellent sport fishing, with largemouth, smallmouth, and spotted bass, black crappie, bluegill, redear and longear sunfish, and walleye as the major game species. The reservoir lands support game animals including gray and fox squirrels, wild turkey, and whitetail deer. Bobwhite quail, mourning doves, and rabbit are also present near areas of cultivation. Several pairs of bald eagles nest on project lands each year, and their number is increasing.

Population areas served and accessibility

Approximately 2.8 million persons live within 150 miles of the lake.

Access to the more developed, southern portions of the lake is provided by State and county roads leading from U. S. 270. State Route 298 provides access to the northern shore, and State Route 37 provides access to the western shore. The eastern shore is accessible at two locations (the damsite and at Ouachita State Park) via State Route 227.

Recreation areas

Recreation areas are distributed around the entire lake. However, because the southern shore of the lake has better access, it has more developed recreation areas than the northern shore. The Corps presently has 15 developed recreation areas, two primitive areas, and one wilderness area. These areas occupy over 2000 acres. Corps-developed sites generally provide areas for camping, boat launching, and picnicking, as well as comfort facilities. Swimming areas and group picnic shelters are provided at several areas. Ouachita State Park, on the eastern shore of the lake, offers a marina and restaurant, picnicking, camping, cabins, and a variety of naturalist programs on 370 acres.

Commercial concessionaires lease 236 acres from the Corps at nine of the developed recreational sites. Facilities provided by commercial concessions include housekeeping cabins, motel rooms, transient trailer spaces, boat docks and rentals, boat slips, launching ramps, eating establishments, and grocery or general supply stores.

Visitation

In 1978, 2,960,400 recreation days were reported at Lake Ouachita; highest visitation occurs during the months of May, June, and July.

In accordance with letter from DAEN-RDC, DAEN-ASI dated 22 July 1977, Subject: Facsimile Catalog Cards for Laboratory Technical Publications, a facsimile catalog card in Library of Congress MARC format is reproduced below.
